## What's Up @ KPIT KPIT's Best, Delivered Hot! *November 19, 2022*

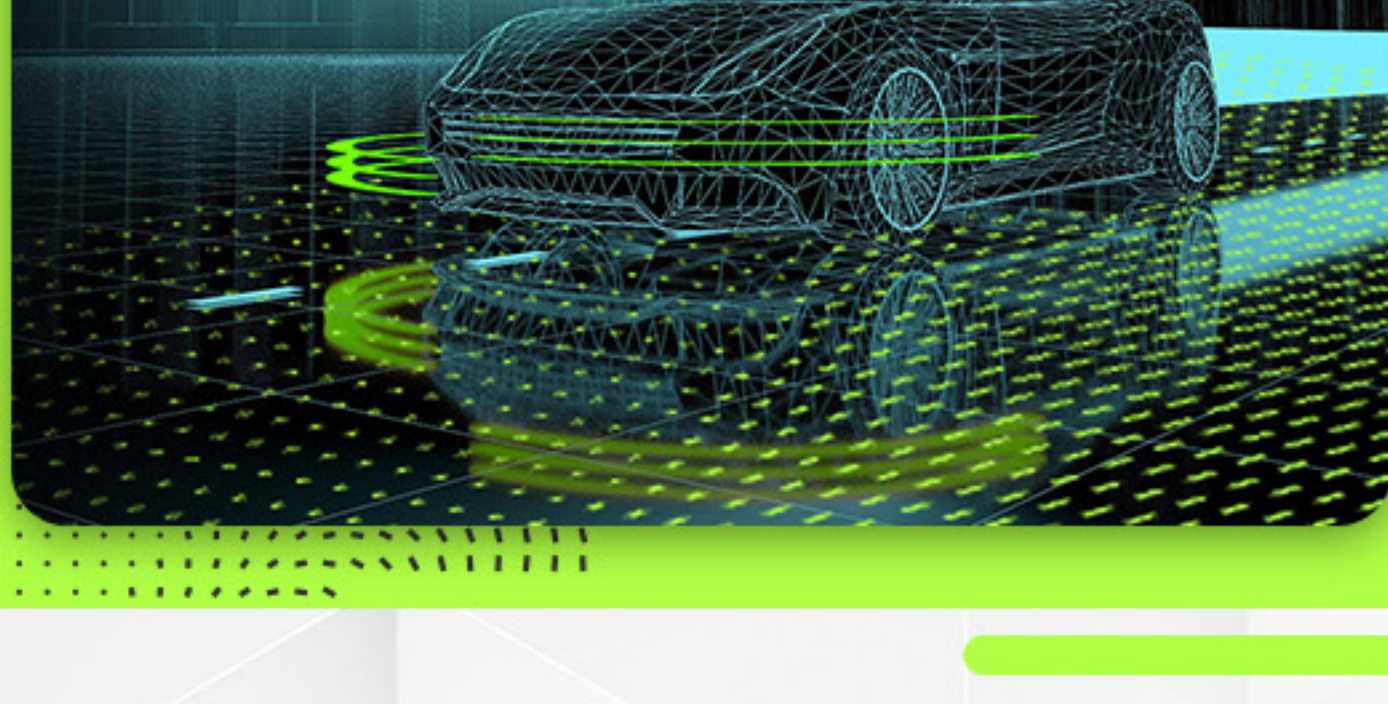

### QUALITY FUN

Quality is not a single act; it is a habit refined over time. At KPIT, given the importance of mobility in people's lives, we always aim for zero-defect delivery in everything we do. But does the process of achieving this aim have to be boring? Absolutely not! That's why, on the occasion of World Quality Day we organized fun contests across our Thailand & Munich offices, where KPITians got the chance to augment their quality consciousness! What better way to achieve perfection than while having fun?

### ACCIDENTS HURT, SAFETY SHOULDN'T

As Automobelievers, our actions will decide the fate of autonomous driving. A key step towards seeing it become reality is to ensure a high degree of safety that can inspire confidence. Take a leaf out of the latest article published in the prestigious German magazine - Hanser Automotive, where KPIT's Subject Matter Expert (SME) Sabahudin Husic explores how KPIT is moving beyond mere 'fail-safes' to 'fail-operational' safety to make autonomous vehicles safer.

### A TASTE OF WHAT'S TO COME

Back in 2020, we signed a large-scale order extending over several years with the BMW Group that will see us provide services relating to software development, integration, and maintenance of combined powertrain coordination unit, and charging control. What does it mean for you? With this partnership, you could get the opportunity to explore cutting-edge work with one of the world's most loved automobile groups that are pushing the boundaries of Battery EVs.

### AN EV TIME CAPSULE

Excited to reimagine Electric Vehicles for the world soon? There's something we need to do first. Fasten your seatbelts as we turn the clock back and make a few quick pitstops through the timeline of EV evolution.

### CITIES THAT TALK BACK

Reimagining mobility isn't just about the present, it's about looking to the future and seeing opportunities where no one else does. Take a cue from our Co-founder, MD & CEO, Kishor Patil who hints at how collaboration between governments and the automotive industry could pave the way for smart-cities of the future, where traffic lights could communicate with software enabled vehicles and much more!
